(Open to remote/hybrid work – full-time availability)

Professional summary

Full Stack Software Engineer with experience in enterprise applications in production. I turn business processes into reliable systems: before writing code I map the process, document rules and risks, record architecture decisions, and define API contracts and acceptance criteria.

I build end to end with Python, C#/.NET and Node.js on the backend, and React and Angular on the frontend. Quality is part of every delivery: automated tests, regression checks before every change, and production incident resolution.

Technical skills

- **Backend:** Python (FastAPI, Django), C# / .NET, Node.js (Express), PHP (Laravel)
- **Frontend:** React, Next.js, Angular, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
- **Databases:** PostgreSQL, SQL Server, MySQL, Redis, Entity Framework, SQLAlchemy, Alembic
- **Testing & quality:** pytest, unit and integration tests, regression testing, acceptance criteria, test plans
- **DevOps & cloud:** Docker, Azure, Azure DevOps, Git, GitHub, CI/CD, Linux, DigitalOcean
- **Architecture & process:** REST APIs, multi-tenant architecture, ADRs, API contracts, SDLC, Scrum

Work experience

Full Stack Developer

GPS Control | May 2026 – Present | **On-site**

- Develop and maintain enterprise GPS management systems.
- Design and consume REST APIs to integrate internal services and systems.
- Integrate geospatial services (Google Maps, Mapbox) and third-party APIs.
- Build web scraping processes to collect and integrate external data.
- Build AI-powered chat and data analysis features for operations.
- Work with Git and GitHub in an agile team.

Full Stack Developer

GroupCos | October 2025 – April 2026 | **Remote**

Stack: Python, Node.js, MySQL, Docker, Azure

- Developed frontend and backend features for an enterprise platform for sales, users and commercial operations.
- Built and consumed REST APIs to integrate services.
- Diagnosed and resolved production incidents, and maintained existing features.
- Improved the user experience of internal applications.
- Delivered in sprints with Git and Azure DevOps.

Featured projects

Alto Vivo – Multi-business management system

Stack: Python, FastAPI, PostgreSQL, Redis, React, Docker

- Designed and built a multi-tenant platform for inventory, sales, finance, production and reports, with roles, permissions and per-business configuration.
- Documented the full lifecycle: epics, user stories with acceptance criteria, API contracts and architecture decision records (ADRs).
- Added inventory concurrency control to prevent errors in simultaneous sales, and idempotency so a retried charge is never duplicated.
- Automated tests with pytest and a system audit with findings ranked by severity and fixed.
- Versioned migrations with Alembic, a deployment checklist and a backup procedure.

Restaurant operations platform

Stack: Python, FastAPI, PostgreSQL, Next.js, Docker

- Product documented end to end: vision, scope, risks, epics, ADRs and test plan.
- Multichannel orders, kitchen, cash register and payments with an adapter for multiple gateways.
- WhatsApp Cloud API integration: the assistant answers only with data from the database, validated with regression tests over fixed conversations.

AgroKaja – Agricultural marketplace

Stack: Next.js, FastAPI

- Catalog, cart, orders, payments and shipping between producers, farms and buyers.
- Roles for producers, buyers and administrators, with management dashboards.

Education

Software Analysis and Development Technologist (ADSO)

SENA – Completed April 2026

Skills and languages

- Problem solving, teamwork, self-directed learning and adaptability.
- Spanish: native.
- English: B1 – technical reading, documentation and written communication.
